The River Publishers' Series in Communications

## **Principles of Communications: A First Course in Communications**

*Kwang-Cheng Chen*

**ISBN:** 978-87-92329-10-3 & **E Book:** 87-92329-10-1

### **Description**

*Principles of Communications* provides an introduction to the fundamental principles of communications. Basic mathematical background for system and signals, analog communication systems and modern digital communication systems are systematically introduced. *Principles of Communications* theory is been explained in an easy-to-understand way. Advanced topics in modern digital communications, especially related to wireless communications, have been conceptually explained, including forward error correcting codes, fading channels, OFDM, and CDMA. This book serves as the basis of communication system design, and as a way to quickly understand the principles of communication systems for those who do not major in communications. Its readership includes undergraduate an graduate level students in the field of Communications and research engineers at Communications companies.

### **Contents**

1. Preface,
2. History and Milestones of Communication Technology
3. Filtering of Random Processes and Signals
4. Analog Communications
5. Pulse Modulations and Digital Coding
6. Optimal Receiver of Digital Communication Systems
7. Passband Digital Transmission
8. Error Correcting Codes
9. Communications over Wireless in Fading Channels
10. Orthogonal Frequency Division Multiplexing
11. Spread Spectrum Communications and Code Division Multiple Access
12. References; Index

### **Pricing**

**Pp:** 270

**Pub. date:** January 2009

**List Price:** €70

**Order 50+ copies before 31st April 2009 and Save 40%**
