

Dielectric Materials for Energy Storage and Energy Harvesting Devices

Editors:

Shailendra Rajput, College of Engineering, Xi'an International University, Xi'an, China

Sabyasachi Parida, Department of Physics, C.V. Raman Global University, Bhubaneswar, India

Abhishek Sharma, Department of Computer Science and Engineering, Graphic Era Deemed to be University, Dehradun, India

Sonika, Department of Physics, Rajiv Gandhi University, Itanagar, India

As the demand for energy harvesting and storage devices grows, this book will be valuable for researchers to learn about the most current achievements in this sector.

Sustainable development systems are centered on three pillars: economic development, environmental stewardship, and social. One of the ideas established to achieve balance between these pillars is to minimize the usage of nonrenewable energy sources. Harvesting energy from the surrounding environment and converting it into electrical power is one viable solution to this problem. In recent years, there has been a surge in the development of new energy generation technologies such as solar, wind, and thermal energy to replace fossil fuel energy supplies with cleaner renewable ones. Energy harvesting systems have emerged as a key study topic and are rapidly expanding.

Technical topics discussed in the book include:

- Polymer nanocomposites
- Nanomaterials
- Multiferroic properties
- Synthesis of dielectric materials
- Energy harvesting technologies.

DIELECTRIC MATERIALS FOR ENERGY STORAGE AND ENERGY HARVESTING DEVICES

Editors:

River Publishers Series in Energy Sustainability and Efficiency

ISBN: 9788770040013

e-ISBN: 9788770040006

Available From: December 2023

Price: € 108.50 \$ 61.99

KEYWORDS:

Energy storage, capacitor, renewable energy, ferroelectric, piezoelectric, polymer nanocomposite.
