

Neuromorphic Circuits for Nanoscale Devices

Authors:

Pinaki Mazumder, University of Michigan, Ann Arbor, USA Yalcin Yilmaz, University of Michigan, Ann Arbor, USA Idongesit Ebong, University of Michigan, Ann Arbor, USA Woo Hyung Lee, University of Michigan, Ann Arbor, USA

Nanoscale devices attracted significant research effort from the industry and academia due to their operation principals being based on different physical properties which provide advantages in the design of certain classes of circuits over conventional CMOS transistors.

Neuromorphic Circuits for Nanoscale Devices contains recent research papers presented in various international conferences and journals to provide insight into how the operational principles of the nanoscale devices can be utilized for the design of neuromorphic circuits for various applications of non-volatile memory, neural network training/learning, and image processing.

The topics discussed in the book include:

- Nanoscale Crossbar Memory Design
- Q-Learning and Value Iteration using Nanoscale Devices
 Image Processing and Computer Vision Applications for Nanoscale Devices
- Nanoscale Devices based Cellular Nonlinear/Neural Networks

NEUROMORPHIC CIRCUITS FOR NANOSCALE DEVICES

Pinaki Mazumder Idongesit Ebong Woo Hyung Lee

River Publishers Series in Biomedical Engineering

ISBN: 9788770220606 e-ISBN: 9788770220590 Available From: October 2019 Price: € 95.00 \$ 130.00

KEYWORDS:

Memristor, Crossbar Memory, Non-volatile Memory, Multi-State Memory Cell, Neuromorphics, Image Processing, Q-Learning, Resonant Tunnelling Diode (RTD), Cellular Neural/Nonlinear Network (CNN), **Computer Vision**
