

Technology and Agribusiness: How Technology is Impacting Agribusiness

Editor: Victor Grimblatt, R&D Group Director and General Manager
Latin America Executive Sponsor, Synopsys Chile R&D Center, Chile

The world population is growing, and it is expected that in 2050 there will be 9.7 billion inhabitants on the Earth. According to FAO (United Nations, Food and Agriculture Organization) we need to increase the productivity of agriculture by between 50% and 70% to be able to feed the world population in 2050. Other researchers think that reducing the wastage of food may be enough to handle the 2050 population.

Several factors must be considered to ensure that humanity is able to feed the world's population in 2050 and beyond.

- Less arable land: As cities are growing, the space available for agriculture is shrinking.
- Climate change: Dramatic impacts on agribusiness.
- Role of agribusiness on GHG emissions.
- Planetary boundaries and the role of agribusiness.
- Availability of freshwater.
- Soil degradation.

The seasonal school presents and discusses the major problems that agribusiness is facing and the different technologies that can be applied to solve and improve such issues. Specific case studies are presented along with the technological solutions that have been applied to solve or minimize the impact. Agribusiness covers different topics such as arable farming, dairy farming, fruits, vegetables, meat, etc. Each of these domains has different needs that can be addressed through smart agriculture technologies such as circuits and systems. Also, these domains affect the sustainability of the planet as they impact at least 4 out of the 9 planetary boundaries.

Tutorials in Circuits and Systems

Technology and Agribusiness: How Technology is Impacting Agribusiness

River Publishers Series in Electronic Materials, Circuits and Devices

e-ISBN: 9788770225960

Available From: July 2021

Price: € 98.50 \$ 120.00

KEYWORDS:

Agribusiness ; Smart Agriculture, IoT, Sensors, Artificial Intelligence, LoRa, Sigfox, Circuit Design, RF
