

River Publishers Series in Research and Business Chronicles: Biotechnology and Medicine

## **The Stem Cell Microenvironment and its Role in Regenerative Medicine and Cancer Pathogenesis**

**Editors:**

Cristian Pablo Pennisi, Aalborg University, Denmark  
Mayuri Sinha Prasad, Indiana University-Purdue University Indianapolis, USA  
Pranela Rameshwar, Rutgers University, USA

**ISBN:** 9788793379930

**e-ISBN:** 9788793519008

**Available From:** December 2016

**Price:** € 90.00

### **Description:**

How stem cells behave is very much a factor of their local microenvironment, also known as the stem cell niche. Physical, chemical, or electrical signals from the neighboring cells or biochemical signals from distant cells are crucial in the cell fate decision process. A major challenge of tissue engineering is to mimic the natural cell environment by designing very sophisticated scaffolds able not only to mechanically support cells, but also to release signals biologically relevant for governing stem cell fate. In addition, increasing evidence suggests that abnormal interaction of stem cells with their niche is responsible for altered cell function leading to malignant transformation.

This book discusses some of the recent advances in stem cell research that may help understanding the properties of the niche that govern stem cell fate. Technical topics discussed include:

- Stem cell biology
- Cancer stem cells
- Stem cell interactions with biomaterials
- Engineering the stem cell microenvironment
- Stem cells in tissue regeneration and repair

The Disputations Workshop series is an international initiative aimed at disseminating stem cell related cutting edge knowledge among scientists, healthcare workers, students and policy makers. This book emerges as a result of the scientific contributions presented and discussed during the fifth Disputations Workshop held in Aalborg (Denmark) in April 2014. *The stem cell microenvironment and its role in regenerative medicine and cancer pathogenesis* is ideal for academic staff and master/research students in biomedical and health sciences

**Keywords:** Mesenchymal stem cells, pluripotent stem cells, cancer stem cells, cardiovascular disease, corneal regeneration, skeletal muscle, smooth muscle, breast cancer, glioblastoma, invasion, pathotropism, heterogeneity, bioactive surfaces, microtopography, mechanical cues, extracellular matrix, hypoxia, hydrogels, nanoparticles
