

The River Publishers Series in Information Science and Technology

Building the Future Internet through FIRE

2016 FIRE Book: a Research and Experimentation based Approach

Editors:

Martin Serrano, National University of Ireland Galway, Ireland

Nikolaos Isaris, European Commission, Belgium

Hans Schaffers, Saxion University of Applied Sciences, Netherlands

John Domingue, Open University, United Kingdom

Michael Boniface, IT Innovation, United Kingdom

Thanasis Korakis, Polytechnic Institute of NYU, USA

ISBN: 9788793519121

Available From: June 2017

Description:

The Internet as we know it today is the result of a continuous activity for improving network communications, end user services, computational processes and also information technology infrastructures. The Internet has become a critical infrastructure for the human-being by offering complex networking services and end-user applications that all together have transformed all aspects, mainly economical, of our lives. Recently, with the advent of new paradigms and the progress in wireless technology, sensor networks and information systems and also the inexorable shift towards everything connected paradigm, first as known as the Internet of Things and lately envisioning into the Internet of Everything, a data-driven society has been created. In a data-driven society, productivity, knowledge, and experience are dependent on increasingly open, dynamic, interdependent and complex Internet services. The challenge for the Internet of the Future design is to build robust enabling technologies, implement and deploy adaptive systems, to create business opportunities considering increasing uncertainties and emergent systemic behaviors where humans and machines seamlessly cooperate.
