

River Publishers Series in Communications and Networking

Understanding Communications Systems Principles - A Tutorial Approach

Author: Héctor J. De Los Santos, NanoMEMS Research, LLC, USA

ISBN: 9788770223751

e-ISBN: 9788770223744

Available From: May 2021

Price: € 110.00

Description:

Wireless communications and sensing systems are nowadays ubiquitous; cell phones and automotive radars typifying two of the most familiar examples. This book introduces the field by addressing its fundamental principles, proceeding from its very beginnings, up to today's emerging technologies related to the fifth-generation wireless systems (5G), Multi-Input Multiple Output (MIMO) connectivity, and Aerospace/Electronic Warfare Radar. The tone is tutorial. Problems are included at the end of each chapter to facilitate the understanding and assimilation of the material to electrical engineering undergraduate/graduate students and beginning and non-specialist professionals. Free temporary access to Keysight's SystemVue system simulation is provided to further enhance reader learning through hands-on tutorial exercises.

Chapter 1 introduces wireless communications and sensing and in particular how curiosity-driven scientific research led to the foundation of the field. Chapter 2 presents a brief introduction to the building blocks that make up wireless systems. Chapter 3 focuses on developing an understanding of the performance parameters that characterize a wireless system. Chapter 4 deals with circuit topologies for modulation and detection. In chapter 5 we cover the fundamental transmitter and receiver systems architectures that enable the transmission of information at precise frequencies and their reception from among a rather large multitude of other signals present in space. Chapter 6 introduces 5G, its motivation, and its development and adoption challenges for providing unprecedented levels of highest speed wireless connectivity. Chapter 7 takes on the topic of MIMO, its justification and its various architectures. Chapter 8 addresses the topic of aerospace/electronic warfare radar and finally Chapter 9 presents three Tutorials utilizing the SystemVue simulation tool.

Keywords: Wireless communications, radars, Antennas, Transmitters, Receivers, Modulation, Demodulation, Spectrum, AM, FM, Direct Sequence Spread Spectrum, Frequency Hopping, Orthogonal Frequency Division Multiplexing (OFDM), Non-Orthogonal Multiple Access (NOMA), 5G, Massive MIMO, Aerospace/Electronic Warfare, Keysight SystemVue Tutorial Exercises.
