Maharashtra, India

A. Rakesh Kumar, KPR Institute of Engineering and Technology, India

Sanjeevikumar Padmanaban, University of South-Eastern Norway,  
Norway.

This book discusses the operation of power systems amid the 4th industrial revolution and the value of Industry 4.0 technologies to grid operators and end customers.

The concept of smart grids was introduced years ago, but their practical implementation into power grids was delayed as the information communication technology infrastructure was not ready. The transition to smart grids can be put into three dimensions: decentralization, decarbonization, and digitalization. Industry 4.0 technologies can enable more advanced features that can add value to all parties in smart grids and achieve a more holistic efficiency increase for the entire system via accomplishing business goals and realizing technical requirements.

Technical topics discussed in the book include:

- Structure of the generalized IoT value chain and IoT applications for low carbon technologies.
- Topological improvement of electrical equipment to facilitate a smooth transition to the smart grid infrastructure.
- Improvement of techniques to tackle advanced power system problems such as energy management, power equipment diagnostics, and renewable energy integration.
- Modeling, simulation, and analytic tools for cyber-attacks and cyber security actions for current cyber-physical power systems.
- Artificial intelligence, big data, and machine learning application to power system problems.
- Intelligent controllers for an advanced residential system.

### TABLE OF CONTENTS

1. Introduction to the 4th Industrial Revolution and Transition to Smart Grids
2. Infrastructure for 4th Industrial Revolution Technologies
3. Cyber-physical Systems
4. Diagnosis of Power Components Amid the 4th Industrial Revolution
5. Effective Energy Management Amid the 4th Industrial Revolution
6. Renewable Energy Integration Amid the 4th Industrial Revolution

## River Publishers Series in Power

**ISBN:** 9788770226769

**e-ISBN:** 9788770226752

**Available From:** June 2024

**Price:** € 104.50 \$ 126.50

### KEYWORDS:

Industrial revolution, smart grids, artificial intelligence, machine learning, intelligent controllers, cyber-physical systems, power equipment diagnostics, renewable energy integration, energy management.
