Advanced Security Frameworks for Future Wireless Networks

Editors:

Abdulwaheed Musa, Kwara State University, Malete, Nigeria.

Agbotiname Lucky Imoize, Faculty of Engineering, University of Lagos, Akoka, Lagos, Nigeria.

Oleksandr Kuznetsov, eCampus University, Novedrate (CO), Italy; V. N. Karazin Kharkiv National University, Kharkiv, Ukraine

This book, Advanced Security Frameworks for Future Wireless Networks, provides a comprehensive guide to designing and implementing sophisticated security frameworks to secure emerging wireless communication systems. The book systematically bridges the gap between research and practice, empowering its audience to tackle critical security and privacy issues, develop robust security architectures, and help enable secure wireless ecosystems in an increasingly connected world. The book is tailored to industry professionals seeking actionable solutions and researchers seeking to deepen their knowledge of advanced security frameworks. Additionally, the book is a valuable resource for navigating the complexities of security and privacy in modern wireless networks.

TABLE OF CONTENTS

- Artificial Intelligence for Resilient and Secure Wireless Communication Systems: A Comprehensive Survey of Methods, Applications, and Future Directions
- Advanced Machine Learning for Securing Wireless Communication Systems: A Comprehensive Review
- Privacy-preserving Distributed Sensing with Error-adaptive Calibration
- Advanced Cryptographic Techniques Enabling the Security of Future Wireless Networks
- DecentRAN — Decentralized Radio Access Network for 6G and Beyond
- Examining the Threat Landscape in Emerging Wireless Communication Systems
- Addressing Security Vulnerabilities in IoT Devices and Edge Computing Networks
- Design of an Access Control System Leveraging Computer Vision and IoT for Enhanced Security
- Secure Data Transmission Algorithms for Modern Ad Hoc Networks: Design and Implementation
- Modern Wireless Network Architectures and Emerging Security Challenges
- Artificial Intelligence for Building Resilient and Secure Wireless Communication Systems
- Advanced Machine Learning Algorithms for Robust Wireless Security
- Blockchain-based Security Solutions for Next-generation Wireless Systems
- Blockchain-based Trust Architectures for Distributed Wireless Networks: Security Frameworks and Challenges
- Advanced Biometric Authentication Frameworks for Secure Wireless Access: From Theory to Implementation
- Ethical Considerations for Security Frameworks in Advanced Wireless Networks
- Legal Implications and Regulatory Frameworks for Security in Advanced Wireless Networks
- Zero-knowledge Proofs for Secure Authentication in Wireless Networks: Advanced Frameworks and Implementation
- Recent Advances and Future Trends in Security Frameworks for Wireless Networks
- New Case Studies and Real-world Applications of Security Frameworks in Advanced Wireless Networks
- Exploration of Security Incident Response in Modern Wireless Networks
- Privacy Violations and Policy Regulations for AI-empowered Wireless Networks
