Advanced Data Acquisition and Intelligent Data Processing

Applications In Monitoring, Measuring and Diagnostics Systems

Editors:

Vladimír Haasza & Kurosh Madani, Czech Technical University in Prague, Czech Republic & University PARIS-EST Créteil (UPEC), France

DAQ and data processing is a basic part of all automated production systems, diagnostic systems, watching over quality of production, energy distribution, transport control or in various other areas. Demands on the speed, accuracy and reliability increase in general. It is possible to achieve not only using superior (but also more expensive) hardware, but also applying advanced data acquisition and intelligent data processing. It deals e.g. optimal data fusion of a number of sensors, new stochastic methods for accuracy increasing, new algorithms for acceleration of data processing, etc. These are the grounds for publishing this book.

Advanced Data Acquisition and Intelligent Data Processing offers 10 up-to-date examples of different applications of advanced data acquisition and intelligent data processing used in monitoring, measuring and diagnostics systems. The book arose based on the most interesting papers from this area published at IDAACS?2013 conference. However, the indivudual chapters include not only designed solution in wider context but also relevant theoretical parts, achieved results and possible future ways.

Technical topics discussed in this book include:

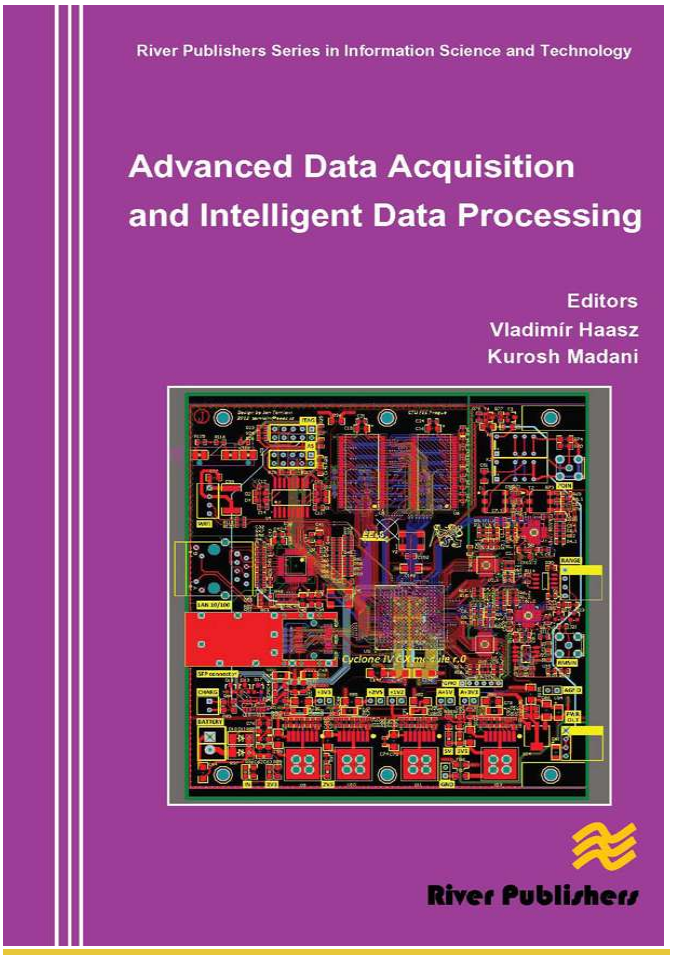
- advanced methods of data acquisition in application that are not routine;
- measured data fusion using up-to-date advanced data processing;
- nonlinear dynamical systems identification;
- multidimensional image processing.

Advanced Data Acquisition and Intelligent Data Processing is ideal for personnel of firms deals with advanced instrumentation, energy consumption monitoring, environment monitoring, non-descructive diagnostics robotics, etc., as well as academic staff and postgraduate students in electrical, control and computer engineering.

TABLE OF CONTENTS

Content:

1. Introduction; 2. Waveform acquisition with resolutions exceeding those of the ADC employed; 3. Different Disaggregation Algorithms in Non-Intrusive Home Energy Monitoring Systems; 4. Design and testing of an electronic nose system sensitive to the aroma of truffles; 5. DAQ System for Ultrasonic Transducer Evaluation under Spread Spectrum Excitation; 6. Optimal Data Fusion in Decentralized Stochastic Unknown Input Observers; 7. Odor Classification by Neural Networks; 8. ANFIS Based Approach for Improved Multisensors Signal Processing; 9. Neuro-Fuzzy Sensor's Linearization Based FPGA; 10. Interpolation Method of Nonlinear Dynamical Systems Identification Based on Volterra Model in Frequency Domain ; 11. Training Cellular Automata for Hyperspectral Image Segmentation



River Publishers Series in Computing and Information Science and Technology

ISBN: 9788793102736
Available From: May 2014
Price: € 90.00 $ 150.00

KEYWORDS:
data acquisition, smart metering, sensor; sensor network; neural networks; adaptive neuro-fuzzy system, identification, prediction, correction, calibration, FPGA; linearization; nonlinear dynamic systems; polyharmonic signals; hyperspectral imaging;
