Wideband FM Techniques for Low-Power Wireless Communications

Author: John Gerrits, CSEM, Switzerland and Delft University of Technology, The Netherlands

Ultra Wideband (UWB) communications are poised to enable short-range applications, such as remote health monitoring (e-health) and home or office automation. Sensor networks are also suitable candidates for UWB since the low radiated power of the UWB transmitter enables low DC power consumption, yielding long battery life and the possibility to use energy scavenging. Size and cost constraints require a low-complexity approach that allows multiple users to share the same RF bandwidth, and offers robustness to interference, frequency-selective multipath and antenna mismatch.

Wideband FM Techniques for Low-Power Wireless Communications presents research and applications that have taken place in UWB Communications over the past years. This book is being published posthumously in agreement with the authors' former colleagues from both the Swiss Center for Electronics and Microtechnology (CSEM) and Delft University of Technology in The Netherlands.

River Publishers Series in Circuits and Systems

Wideband FM Techniques for Low-Power Wireless Communications

John Gerrits

River Publishers Series in Electronic Materials, Circuits and Devices

ISBN: 9788793379626

e-ISBN: 9788793379619

Available From: June 2016

Price: € 75.00

KEYWORDS:

Wireless Communications, Ultrawideband (UWB), RF Circuits, Low-Power Circuits
