Selected Topics in RF, Analog and Mixed Signal Circuits and Systems

Editors:

Kiran Gunnam, Western Digital Corporation, USA

Mohammad VahidFar, Apple, USA

CMOS process technology progress has led to a revolution towards new and innovative integrated circuits and systems. This trend is still moving forward for applications ranging from high-speed wireless and wireline data transfer down to ultra-low-power mobile applications for more interconnected world. The high performance analog and RF circuits and systems are at the heart of all these developments.

Selected Topics in RF, Analog and Mixed Signal Circuits and Systems provides an overview and the state of the art developments on several selected topics in RF, analog and mixed signal circuits and system. The topics include ADC conversion and equalization for high-speed links, clock and data recovery for high speed wireline transmission with speeds in several Gb/s, signal generation for terahertz application, oscillator phase noise fundamentals and analog/digital PLL overview.

Topics covered in the book include:

- Overview of Oscillator Phase Noise
- Clock and Data Recovery in High-Speed Wireline Communication
- Phase Lock Loop Design Techniques
- Terahertz and mm-Wave Signal Generation, Synthesis and Amplification: Reaching the Fundamental Limits
- Equalization and A/D conversion for high-speed links

River Publishers Series in Electronic Materials, Circuits and Devices

ISBN: 9788793519183

e-ISBN: 9788793519176

Available From: December 2016

Price: € 80.00

KEYWORDS:

Time-Variation, Phase Modulation, Oscillator Phase Noise; Data Recovery, High-Speed Wireline Communication; Analog-to-Digital Converters, High-Speed Links, Terahertz, mm-Wave Signal Generation and A/D Conversion for High-Speed Links
